PHENOXYZONE INJECTABLE 50 ml

Type	Antibiotic, anti-inflammatory
Composition	<p>Oxytetracycline: 1 g Chloramphenicol: 10g Lidocaine chlorhydrate: 1 g Dexamethasone: 0.1 g Excipient: q.s. 100ml</p>
Intended For	Cattle, sheep
Uses	<p>The association of oxytetracycline and chloramphenicol gives Phenoxyzone a broad anti-infectious spectrum. All the bacterial infections are covered. The dexamethasone is efficient against inflammation, pain and allergy. As a consequence, the animal recovers quicker due to the synergical effect on animals.</p> <p>The lidocaine permits a non painful injection.</p> <p>Used against gram + and gram - bacterial infections: navel ill, arthritis, metritis, respiratory diseases, enteritis, skin lesions, interdigital eczema, kerato-conjunctivitis, colibacillosis, salmonellosis, pasteurellosis, mycoplasmosis, rickettsiosis.</p>
Dosage & Administration	<p>Deep intramuscular injection One daily injection, for 3 to 5 days in succession. 10 ml for 100 kg body weight</p>
Warnings	Not for pregnant females during the last trimester of pregnancy. Do not inject more than 25ml per site for cattle and 10ml per site for sheep
Storage	To be stored away from light and heat, below 25°C.
Withdrawal Period	<p>Meat and offal: 14 days Milk: 6 days</p>
